

Using AGGRAND to Grow Wheat & Small Grains

Post-Harvest (if desired)

- Late summer – 1 gallon per acre of AGGRAND Natural Fertilizer 4-3-3 tilled in with stubble or crop residue.

Pre-Harvest

- Spring, after green-up, at tilling – *1 gallon per acre* AGGRAND 4-3-3, and 1 gallon AGGRAND Liquid Lime. Thoroughly cover foliage using a fine mist.
- At Flag leaf, before heading (boot-up), 2 gallons per acre AGGRAND 4-3-3. Applied as a foliar application

May be mixed at 1:10 to 1:50 parts water. Use enough to insure adequate coverage.

Low organic matter levels in soils can be gradually improved by incorporation of crop residues into the soil.
